Sensors for Fluid Measuring Technology

HYDROTECHNIK

Limitation of liability

The information contained in this catalog has been examined carefully. Nevertheless it is possible that printing or other errors are contained. Therefor we do not take any liability for the correctness of the contained information. They must not be regarded as warranted characteristics, only the product descriptions contained in our offers are decisive.

We reserve all changes due to the technical development and improvement of our products. All prior catalogs loose their validity.

The data contained in this catalog have to be seen as average values and not binding hints. They can be used for constructional purposes in a limited way, only. Please ask for our technical data sheets and construction helps.

Since the use of our products is subject to your responsibility, you will have to check their fitness for the desired application in any case.

All deliveries are carried out solely on the basis of our conditions of sales and delivery. They can be accessed on our homepage www.hydrotechnik.com in the section „Impressum“.

Continuity and Innovation

Information is everything, especially when it comes to complex machinery and installations. Accurate information allows you to monitor condition, quality and performance thereby helping you to prevent catastrophic failures or breakdowns.

For decades, Hydrotechnik has focused on simplifying and improving the detection, collection and evaluation of information from hydraulic installations. We are the inventors of the MINIMESS testpoint and innovators in hydraulic diagnosis. We offer a comprehensive product range to suit a wide variety of applications.

As a streamlined, medium size company, Hydrotechnik's great strength is our ability to develop bespoke or adapted products to fulfill our customers needs, providing you with swift and cost effective customized solutions.

By using modern tools and methods of product design, construction and production, we are able to react quickly to customers' wishes and market developments.

Many of the sensors in this catalogue can be connected to the wide range of Hydrotechnik dataloggers and systems. The icon shown indicates that this is the case. Sensors equipped with ISDS (Intelligent Sensor Detection System) developed for our dataloggers and measuring instruments can be seen in our „Measuring Technology” catalogue which can be downloaded from www.hydrotechnik.com or be obtained from your local Hydrotechnik distributor.

Quality – Our number one priority

For Hydrotechnik, 'Quality without Compromise' is not just a statement. It is a working reality. All areas of the company adhere to maintaining ISO9001 standards, certification of which was awarded in 1996.

To ensure maximum quality control, Hydrotechnik practices the highest standards of manufacturing at our works in Limburg, Germany. Starting with metal working on CNC machines, assembly with modern automated machines through to manual production using highly qualified workers, everything is done to achieve the renowned Hydrotechnik standard of quality.

Where in-house production is not possible, we work with well-known suppliers. When choosing our supply partners, we do not just look at cost but we insist on the ability to achieve our priority of quality. Strict control of the supplied components ensures that the products fully comply with our quality standards.

Condition and thickness of surface coatings are measured using x-ray technology

Tactile sensors with ultra-high precision check the size accuracy of a component

Test technician Bernd Zey executes a surface testing of delivered parts

5 µm is the allowed tolerance for these gear wheels

Temperature sensors are calibrated using several test installations

Test technician Robert Rinkart calibrates a pressure sensor by loading it with high-precision weights

Using the latest technology, turbine flow meters and ...

... gear flow meters are tested and calibrated ...

... with the greatest accuracy ensuring precise measuring results.

You will never walk alone

For Hydrotechnik, customer relations do not end with the purchase of a product.

We offer an efficient, reliable and highly-qualified maintenance, repair and calibration service that helps you maintain the value of your Hydrotechnik product.

Calibration

Hydrotechnik runs a calibration laboratory accredited by DKD for the measurands pressure and volume flow. We offer factory calibrations for further measurands, or collaborate with other calibration bodies.

We recommend the regular re-calibration of all sensors, especially volume flow sensors.

Maintenance

With regular qualified maintenance you get the certainty that sensors and measuring instruments function perfectly and maintain accurate measuring results.

We inspect sensors and measuring instruments from Hydrotechnik or other companies in the shortest possible time to reduce the unavoidable off times to a minimum.

Repair

Hydrotechnik products have a very high quality level and are designed for a long life. If damage occurs, we repair reliably, fast and at a reasonable cost.

HySense® – Sensors for all applications

HySense is the new name for all sensors made by Hydrotechnik. It is synonymous with quality without compromise and with unlimited reliability.

The new systematic naming of the sensors indicates the sensor type.

Many features are integrated into the new names, as shown below:

PR 100

Measurand

The two letters at the beginning of the model name indicate the sensor type:

PR	pressure	QL	load valves
PS	pressure switch	RS	rotational speed
TE	temperature	TQ	torque
TP	pressure and temperature	PO	position
QG	volume flow (gear)	FO	force
QT	volume flow (turbine)	VB	vibration
QO	volume flow (oval wheel)	AC	accessories

Model series

The first digit of the model name indicates the model series. The current model series are numbered consecutively starting with 1.

Measurand-specific identifier

The second digit of the model name is reserved for an identifier that indicates either the type of the connecting plug (for all sensors, except volume flow sensors), or the output signal of the sensor (for volume flow sensors).

The coding is shown at the beginning of each section of this catalogue.

Special versions

The third digit of the model name indicates special versions of the sensor:

5	explosion-proof
6	CAN output signal
7	high-temperature
8	increased IP protection
9	DESINA conform version

Pressure is a central factor in fluid technology. By measuring the pressure, basic settings in systems and installations can be made and it is also very important for diagnosis of the complete system.

Hydrotechnik offers a broad range of piezo-resistive sensors where the deformation of a metal membrane

influences electrical resistance which can be used to determine pressure values and dynamic changes.

The offered sensors are separated into three product families:

HySense PR 1xx

Proven standard sensors for industrial use, equipped with a measuring cell made of high-grade steel. Special versions for explosive environments, with increased IP protection and CAN output signal.

HySense PR 2xx

High-precision sensor with very small dimensions. Ideal for all applications with reduced installation space.

HySense PR 3xx

Our top model for measuring tasks requiring the highest accuracy. We use a piezo-resistive silicon chip protected from environmental influences by a high-grade steel casing. A thin flexible metal membrane in the casing separates the transmission fluid from the medium.

Connector versions

The second digit of the model name indicates the connector type:

0	6 pole device connector, M16 x 0,75
1	5 pole device connector, M16 x 0,75
2	5 pole device connector, M12 x 1
3	4 pole device connector, M12 x 1
4	4 pole device connector, EN 175301-803 type A, Pg9
5	4 pole device connector, EN 175301-803 type C, Pg7
8	other connector versions
9	open wires

HySense PR 130

4 pole device connector, M12 x 1

PR

Dimensions

- A 4 pole device connector
- B ISO 228 – G¼ A
- C Restrictor insert Ø 0.6 for measuring ranges
> 0 ... 60 bar (0 ... 6.0 MPa)
- D Profile seal acc. to DIN 3869, FKM
- E SW 22

Qualities

Measuring principle	piezo-resistive (poly-cristalline silicon thin film structure on high-grade steel membrane)
Pressure type	relative pressure
Output signal	4 ... 20 mA / 0 ... 10 VDC
Electrical measuring connector	4 pole device connector, M12 x 1
Mechanical connection thread	ISO 228 – G ¼ A
Sealing material	profile seal ring acc. to DIN 3869, FKM
Protection type (EN 60529 / IEC 529)	IP 67 (when connector is screwed)
Casing material	non-corrosive high-grade steel
Membrane material	non-corrosive high-grade steel
Tightening torque	40 Nm (± 5 Nm)
Weight	~ 85 g

Pin assignment

	4 ... 20 mA (two wires)	0 ... 10 V (three wires)
1	+ Ub / signal +	+ Ub
2	free	free
3	– Ub / signal –	– Ub / signal – / GND
4	free	Signal +

Measuring range		Order number	
bar	MPa	4 ... 20 mA	0 ... 10 V
-1 ... 6	-0.1 ... 0.6	3403-32-I5.37	3403-32-I5.39
0 ... 10	0 ... 1.0	3403-26-I5.37	3403-26-I5.39
0 ... 25	0 ... 2.5	3403-40-I5.37	3403-40-I5.39
0 ... 60	0 ... 6.0	3403-21-I5.37	3403-21-I5.39
0 ... 100	0 ... 10	3403-16-I5.37	3403-16-I5.39
0 ... 250	0 ... 25	3403-17-I5.37	3403-17-I5.39
0 ... 400	0 ... 40	3403-15-I5.37	3403-15-I5.39
0 ... 600	0 ... 60	3403-18-I5.37	3403-18-I5.39
0 ... 1.000	0 ... 100	3403-29-I5.37	3403-29-I5.39

Common technical data on page 14. Further output signals on request.
Measuring ranges > 1000 ... 4000 bar (100 ... 400 MPa) on request.

Dimensions

- A Contact box, Typ EN 175301-803, type A
 B Device connector SW 33,5
 C ISO 228 – G $\frac{1}{4}$ A
 D Restrictor insert \varnothing 0.6 for measuring ranges
 > 0 ... 60 bar (0 ... 6.0 MPa)
 E Profile seal acc. to DIN 3869, FKM
 F Profile seal

Qualities

Measuring principle	piezo-resistive (poly-crystalline silicon thin film structure on high-grade steel membrane)
Pressure type	relative pressure
Output signal	4 ... 20 mA / 0 ... 10 VDC
Electrical measuring connector	4 pole device connector, DIN EN 175301-803, type A, Pg9
Mechanical connection thread	ISO 228 – G $\frac{1}{4}$ A
Sealing material	profile seal ring acc. to DIN 3869, FKM
Protection type (EN 60529 / IEC 529)	IP 65 (with connecting cable \varnothing 6 ... 8 mm)
Casing material	non-corrosive high-grade steel
Membrane material	non-corrosive high-grade steel
Tightening torque	40 Nm (\pm 5 Nm)
Weight	~ 117 g

Pin assignment

	4 ... 20 mA (two wires)	0 ... 10 V (three wires)
1	+ Ub / signal +	+ Ub
2	- Ub / signal -	- Ub / signal - / GND
3	free	Signal +

Measuring ranges		Order number

Common technical data

The technical data shown here is valid for the sensors in the HySense® PR 1xx range, mentioned on the previous pages:

- PR 130
- PR 140
- PR 150
- PR 155
- PR 190

Technical data	PR 130 / PR 140 / PR 150 / PR 190	PR 155
Overload range	1.5 x nominal pressure	
Burst pressure	3 x nominal pressure	
Signal type	Two wire analog (4 ... 20 mA), three wire analog (0 ... 10 VDC)	
Supply voltage U_b		
... at 4 ... 20 mA	10 ... 30 VDC	30 V
... at 0 ... 10 VDC	12 ... 32 VDC	–
Current consumption	6.5 mA	50 mA
Overvoltage protection	32 VDC	
Error limit (of final value)	comprises the influences non-linearity, hysteresis, repeatability, zero-point- and span error	
... at +22 °C (room temperature)	± 0.5 %	
... at -15 ... +85 °C	< ± 1.0 %	
... at +85 ... +100 °C	< ± 2.5 %	
... at -40 ... -15 °C	< ± 2.5 %	
Compensation temperature range	-40 ... +100 °C	
Non-linearity	< ± 0.4 % of final value	
Reproducibility	< ± 0.1 % of final value	
Hysteresis	< ± 0.1 % of final value	
Long-term stability	< ± 0.1 % of final value/year	
Response time	< = 1 ms (10 ... 90 %)	
Frequency range	< = 1 kHz	
Isolation resistance	min. 100 MΩ	
Total resistance	$R_g = (U_b - 10 \text{ V}) / 20 \text{ mA}$ (at output signal 4 ... 20 mA)	
Load resistance	$R_L = > 5 \text{ kΩ}$ (at output signal 0 ... 10 VDC)	
Number of load cycles	> 1 x 10 ⁷	
Medium temperature	-40 ... +125 °C	
Environmental temperature	-40 ... +105 °C (short term +125 °C)	-40 ... +85 °C
Storage temperature	-40 ... +125 °C	
EMV test	EN 50081-2, EN 50082-2	
Vibrational stability	5 mm 10 ... 32 Hz, 20 g 32 ... 500 Hz, DIN EN 60068-2-6	
Shock stability	50 g (11 ms half-sine)	
Mounting orientation	arbitrary	

Dimensions

- A 5 pole device connector, M12 x 1
 B SW 22
 C Profile seal ring acc. to DIN 3869, FKM
 D Restrictor insert Ø 0.6
 E ISO 228 G $\frac{1}{4}$ A

Qualities

Measuring principle	piezo-resistive (poly-cristalline silicon thin film structure on high-grade steel membrane)
Pressure type	relative pressure
Output signal	CANopen
Electrical measuring connector	5 pole device connector, M12 x 1
Mechanical connection thread	ISO 228 – G $\frac{1}{4}$ A
Sealing material	profile seal ring acc. to DIN 3869, FKM
Protection type (EN 60529 / IEC 529)	IP 67 (with screwed connector)
Casing material	non-corrosive high-grade steel
Membrane material	non-corrosive high-grade steel
Tightening torque	40 Nm (\pm 5 Nm)
Weight	~ 100 g
CAN bus	LSS slave function
Baud rate	10 ... 500 kBaud (settable)
CAN interface	acc. to DIN 11898

Pin assignment

CANopen

0 ... 100	0 ... 10	3403-16-D2.60
0 ... 400	0 ... 40	3403-15-D2.60
0 ... 600	0 ... 60	3403-18-D2.60

Technical data	PR 126
Overload range	2 x nominal pressure
Burst pressure	3 x nominal pressure
Signal type	CANopen, digital
Supply voltage U_b	12 ... 27 VDC
Current consumption	10 ... 30 mA, depends on CAN bus load
Overvoltage protection	± 40 VDC
Error limit (of final value)	comprises the influences non-linearity, hysteresis, repeatability, zero-point- and span error
... at +22 °C (room temperature)	± 0.5 %
... at -15 ... +85 °C	± 0.5 %
... at +85 ... +100 °C	± 1.0 %
... at -40 ... -15 °C	± 1.0 %
Compensation temperature range	-15 ... +85 °C
Non-linearity	$< \pm 0.2$ % of final value
Reproducibility	$< \pm 0.1$ % of final value
Hysteresis	$< \pm 0.1$ % of final value
Long-term stability	$< \pm 0.1$ % of final value/year
Response time	≤ 1 ms (0 ... 90 %)
Frequency range	≤ 1 kHz
Isolation resistance	> 100 MOhm
Number of load cycles	1×10^7
Medium temperature	-40 ... +105 °C
Environmental temperature	-40 ... +105 °C
Storage temperature	-40 ... +125 °C
EMV test	EN 50081-2 and EN 50082-2
Vibrational stability	IEC 68-2-6 and IEC 68-2-36, 20 g
Mounting orientation	arbitrary

HySense PR 280

Miniature pressure sensor

This sensor is ideal for applications where very low weight and minimized dimensions are required (e.g. in regulating valves).

PR

Dimensions

- A Connector box PHR-3 by JST
B Restrictor drill hole Ø 0.6

Qualities

Measuring principle	piezo-resistive (poly-cristalline silicon thin film structure on high-grade steel membrane)
Pressure type	relative pressure
Output signal	0.5 ... 4.5 VDC
Electrical measuring connector	connector box JST PHR-3
Mechanical connection thread	M8 x 1
Sealing material	O ring FKM
Protection type (EN 60529 / IEC 529)	IP 00
Casing material	1.4571
Membrane material	non-corrosive high-grade steel
Tightening torque	8 Nm (\pm 2 Nm)
Weight	~ 22 g

Pin assignment

Connector box PHR-3	0.5 ... 4.5 V DC (three wires)
	Pin 1 = Ub
	Pin 2 = GND
	Pin 3 = signal

Due to EMC requirements, it is necessary to install the sensor in a capsuled metal casing.

Technical data	PR 280
Overload range	2 x nominal pressure
Burst pressure	4 x nominal pressure
Signal type	three wire
Supply voltage U_b	12 ... 30 VDC
Current consumption	< 10 mA
Error limit (of final value)	comprises the influences non-linearity, hysteresis, repeatability, zero-point- and span error
... at +22 °C (room temperature)	$\pm 0.5 \%$
... at -15 ... +85 °C	$\pm 0.5 \%$
... at +85 ... +100 °C	$\pm 1.0 \%$
... at -40 ... -15 °C	$\pm 1.0 \%$
Compensation temperature range	0 ... +80 °C
Non-linearity	< $\pm 0.2 \%$ of final value
Reproducibility	< $\pm 0.05 \%$ of final value
Hysteresis	< $\pm 0.1 \%$ of final value
Long-term stability	< $\pm 0.2 \%$ of final value/year
Response time	< = 1 ms
Frequency range	> 1 kHz
Isolation resistance	> 100 MOhm
Load resistance	2.3 kOhm
Number of load cycles	> 1×10^7
Medium temperature	-20 ... +90 °C
Environmental temperature	-40 ... +125 °C
Storage temperature	-40 ... +140 °C
EMV test	DIN EN 61000-4-2 / -3 / -4 / -6 / -8
Vibrational stability	1 mm oscillation way (10 ... 50 Hz) 20 g (20 ... 2,000 Hz)
Shock stability	50 g (6 ms half-sine)
Mounting orientation	arbitrary

5 pole device connector, M16 x 0.75

This pressure sensor has a very fast response time ≥ 1 ms, very low noise qualities and optimized accuracy.

Dimensions

- A 5 pole device connector, M16 x 0.75
B ISO 228 G $\frac{1}{4}$ inside thread

Qualities

Measuring principle	piezo-resistive (silicon chip in stainless steel casing filled with transmission fluid)
Pressure type	relative pressure
Output signal	0 ... 20 mA / 4 ... 20 mA
Electrical measuring connector	5 pole device connector, M16 x 0.75
Mechanical connection thread	ISO 228 – G $\frac{1}{4}$ inside thread
Sealing material	FKM (pressure measuring cell)
Protection type (EN 60529 / IEC 529)	IP 40
Casing material	1.4104, 1.4301
Membrane material	1.4435
Tightening torque	40 Nm (± 5 Nm)
Weight	~ 120 g

Pin assignment

4 ... 20 mA (two wires)

0 ... 20 mA (three wires)

Pin 1 = – Ub / signal –

Pin 1 = signal +

Pin 2 = free

Pin 2 = – Ub / signal – / GND

Pin 3 = + Ub / signal +

Pin 3 = + Ub

Pin 4 = free

Pin 4 = free

Pin 5 = free

EMV test	EN 50081-2, EN 50082-2
Vibrational stability	10 g (5 ... 2,000 Hz), IEC 60068-2-6
Shock stability	50 g (11 ms), IEC 60068-2-29
Mounting orientation	arbitrary

Electronic pressure switch

The HySense® pressure switches are available as standard and to DESINA conformity. They are equipped with a 4-digit, 7-segment display, its 7 mm high red numbers can be read easily in all conditions. The device can be rotated by 280°, is made of zinc die casting with polyester cover foil and powder-coated with crimson color (RAL 3004).

- Measuring instrument with digital pressure display
- One/two threshold switches, separately programmable (exceedance / undercut of a pre-defined pressure)
- Analog output (presentation of the pressure profile)

Dimensions

- A ISO 228-G $\frac{1}{4}$ A
 B with integrated resistor insert \varnothing 0.6 for measuring ranges > 0 ... 60 bar
 C profile seal ring acc. to DIN 3869, FKM

Qualities

Measuring principle	piezo-resistive
Pressure type	relative pressure
Output signal PS 120	4 ... 20 mA / 0 ... 20 mA (settable)
Output signal PS 129	4 ... 20 mA
Electrical measuring connector	5 pole device connector, M12 x 1
Mechanical connection thread	ISO 228 – G $\frac{1}{4}$ A
Sealing material	FKM
Protection type (EN 60529 / IEC 529)	IP 67 (only with screwed cable box)
Switching outputs	2 Mosfet high side switch PNP
Contact function	closer / opener
Switching voltage (VDC)	Supply voltage minus 1.5 VDC
Switching current	max. 0.7 A / switch
Short-circuit current	2.4 A / switch
Casing material	GD-ZnAl4Cu1
Membrane material	1.4542
Tightening torque	40 Nm (\pm 5 Nm)
Weight	~ 350 g

HySense Q

Volume flow sensors

Measuring of volume flow rates is very important for diagnosis and condition monitoring of fluid-technical systems. Hydrotechnik offers four product types, each providing its own specific qualities and advantages.

Gear volume flow sensors (displacement principle)

- Outstanding measuring accuracy, low error limits
- High viscosity independence, broad measuring range for each type
- High medium temperatures and working pressures up to 630 bar
- Linearisation in the measuring instrument
- Detection of flow direction, arbitrary mounting position and connectors
- Measuring of quantities possible (metering)
- Viscosity min. 5 mm²/s (cSt)

Turbine volume flow sensors (flow principle)

- Good reproducibility, low error limits
- Linearisation in the measuring instrument
- Low flow resistance, suitable for lots of media
- Short response time
- Low weight, small dimensions and arbitrary mounting position
- High media temperature and working pressure up to 400 bar
- Small delta-P
- Media viscosity up to 270 mm²/s (cSt)

Oval wheel volume flow sensors (displacement principle)

- High measuring accuracy
- Suitable for lots of media
- Low weight
- Good life expectancy
- Small dimensions

Load valves with turbine volume flow sensors

- Simulation of load conditions
- Pump tests, e.g. recording of characteristic curves
- Volume flow sensor, load valve and test points for pressure and temperature in a single unit

HySense Q

Volume flow sensors

Output signal

The second digit of the model name indicates the output signal of the sensor:

0	digital
1	analog

Important tips for all volume flow sensors

- Each volume flow sensor is delivered with a calibration certificate. Please keep this safe.
- We recommend a re-calibration of the sensor every 1 or 2 years. Please use the Hydrotechnik calibration service. Please do not forget to send the calibration certificate with the sensor when ordering calibration services.
- Multiple calibrations for different viscosities are possible for all volume flow sensors!

HySense QG 100 / QG 110

Gear volume flow sensor

QG

Delivery with f/I-converter for output signal 4...20 mA***

Qualities

Measuring principle	displacement
Viscosity range	5 ... 500 mm ² /s (cSt)
Medium temperature	-20 ... +120 °C
Environmental temperature	max. +80 °C
Storage temperature	-20 ... +85 °C
Output signal	frequency (rectangle) / 4 ... 20 mA
Supply voltage U _b	12 ... 24 VDC
Electrical measuring connector	5 pole device connector, M16 x 0.75
Protection type (EN 60529 / IEC 529)	IP 40
Tightening torque	< 0.5 Nm, thread pin (clamping piece) T 3362000
Calibration viscosity	30 mm ² /s (cSt)
Material casing cover	1.4305
Material middle / bottom part	0.7060
Material sealings	FKM
Material gear wheels	1.7131
Suitable measuring cable	MK 01

The volume flow sensor QG 100 with frequency output signal allows detection of the medium flow direction and impulse duplication when used with Hydrotechnik measuring instruments. A possible application is the positioning during cylinder traverse paths.

Pin assignment

QG 100 (frequency)

QG 110 (4 ... 20 mA)

Pin 1 = signal +	Pin 1 = signal +

QT

HySense® QT 300

Turbine volume flow sensor

1000

NEW

The completely new HySense® QT 300 measures volume flow rates up to 1,000 l/min and is capable of a pressure load up to 420 bar.

Two MINIMESS® test points serially enable problem-free collection of further measurands (pressure, temperature) simultaneously.

Safe integration into existing pressure systems is possible with the 2" SAE flange connectors delivered with the turbines.

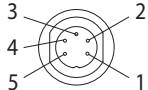

Qualities

Measuring principle	volume flow

HySense QO 100

Oval wheel counter for minimal flow rates

The oval wheel counter QO 100 has been developed for the accurate measurement of minimal volume flow rates. They are robust and characterized by their simplicity and user-friendliness. Typical media are water and watery media, but they can also be used for oil, grease and petrol.

HySense QO 300

High-precision oval wheel counter for low volume flow rates

The oval wheel counters QO 300 work with very high precision and can be used for many applications. They are suitable for oily media, as long as they do not corrode aluminium; e.g. for hydraulic and grease oils, and petrols in process and laboratory environments.

Similar illustration

Important note:

Please consider when applying the QO 300 that it may not be used for media that corrode Aluminium.

Qualities

HySense QL

Turbine volume flow sensors with load valve

Volume flow measuring under load

Testing of pumps, e.g. the recording of a characteristic curve in dependency of the pressure is simplified significantly by using the HySense QL sensors, as a nonexistent load can be simulated.

Volume flow sensor (turbine), load valve and test points for pressure and temperature are combined in a single unit. The mechanical connection (inlet and outlet) are designed as inside thread 150 228-G 1¼".

The required pressure protection must be provided by the customer, e.g. by mounting a pressure limiting valve in front of the HySense QL, or with the upstream hydraulic system.

Application examples

- Hydraulic load simulations
- Hydraulic performance test and efficiency measurings
- Component tests
- Load setting of hydraulic components
- Pump tests

Special advantages of HySense QL

- measuring of pressure and temperature with separate sensors
- sensitive pressure adjustment
- all controls are easy to operate
- versions for 0 ... 300 and 0 ... 600 l/min available

Please ensure that the hydraulic system has an adequate pressure protection when using HySense QL load valves!

Temperature sensors

Temperature is an important measurand especially for exact determination of viscosity and density of the fluid, and therefore the reproducibility of measuring results. Hydrotechnik offers several models for the fast and reliable capture of the medium temperature:

- TE 110
- TE 118
- TP 180

Connector version

The second digit of the model name indicates the connector type:

0	6 pole device connector, M16 x 0.75
1	5 pole device connector, M16 x 0.75
2	5 pole device connector, M12 x 1
3	4 pole device connector, M12 x 1
4	4 pole device connector, EN 175301-803 type A, Pg9
5	4 pole device connector, EN 175301-803 type C, Pg7
8	other connector versions
9	open cable ends

HySense TE 110

Screw-in sensor for temperature measurement

This sensor is qualified by some specific characteristics. It can be installed in any orientation and achieves highly accurate values, as it is measuring in the medium directly. It can be installed and dismantled easily by screwing it into a 1620 series p/T-test point.

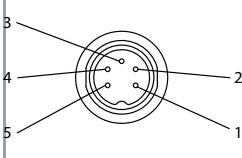

TE

Qualities

Screw series	1620
Measuring principle	Pt 100 (platinum measuring resistor acc. to DIN 43760, class B)
Measuring range	-50 ... +200 °C
Output signal	0 ... 20 mA / 4 ... 20 mA
Signal type	three wires (0 ... 20 mA) / two wires (4 ... 20 mA)
Supply voltage U_b	10 ... 30 VDC
Overvoltage protection	36 VDC
Error limit	$< \pm 1\%$ of final value
Temperature error	$< \pm 0.3\%$ / 10 °C
Pressure load capacity	max. 630 bar / 63 MPa
Environmental temperature	-20 ... +80 °C (related to electronics)

Dimensions see page 57

Screw-in temperature sensor

This sensor is qualified by some specific characteristics. It can be installed in any orientation and achieves highly accurate values, as it is measuring within the medium. It has IP 69 and can be installed and dismantled easily by screwing it into a 1620 series p/T-test point.

Qualities

Screw series	1620
Measuring principle	Pt 100 (platinum measuring resistor in acc. to DIN 43760, class B)
Measuring range	-50 ... +200 °C
Output signal	4 ... 20 mA
Signal type	two wires
Supply voltage U_b	10 ... 30 VDC
Overvoltage protection	36 VDC
Error limit	$< \pm 1\%$ of final value
Temperature error	$< \pm 0.3\%$ / 10 °C
Pressure load capacity	max. 630 bar / 63 MPa
Environmental temperature	-20 ... +80 °C (related to electronics)
Storage temperature	-20 ... +85 °C
Electrical measuring connector	device connector AMP 3 pole, acc. to DIN 72585
Mechanical measuring connector	see drawing
Protection type (EN 60529 / IEC 529)	IP 69
Material	1.4104
Suitable measuring cable	customer-specific

Pin assignment

4 ... 20 mA	
	Pin 1 = - U_b / signal -
	Pin 2 = free
	Pin 3 = + U_b / signal +

Output signal	Weight	Order number

HySense TP 180

Dual sensor for temperature and pressure

This sensor is able to measure pressure and temperature simultaneously at a single test point. It can be installed in any orientation and achieves highly accurate values, as it is measuring within the medium. It can be installed and dismantled easily by screwing it into a 1620 series p/T-test point.

Qualities

Screw series	1620
Output signal	4 ... 20 mA
Signal type	two wires
Supply voltage U_b	10 ... 30 VDC
Overvoltage protection	36 VDC
Environmental temperature	-20 ... +80 °C
Storage temperature	-20 ... +85 °C
Electrical measuring connector	8 pin device connector
Mechanical measuring connector	see drawing
Load resistor	0 ... 1 kOhm
Protection type (EN 60529 / IEC 529)	IP 40
Materials	1.4435, 1.4571
Material sealings	NBR
Weight	est. 255 g

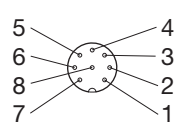

Qualities of the temperature sensor

Measuring principle	Pt 100 (platinum measuring resistor acc. to DIN 43760, class B)
Measuring range	-50 ... +200 °C
Error limit	< ± 1 % of final value
Temperature error	< ± 0.3 % / 10 °C

Qualities of the pressure sensor

Measuring principle	piezoresistive (poly-crystalline silicon thin film structure on a high-grade steel membrane)
Measuring range	0 ... 60 / 600 bar
Over load range	1.5-fold nominal pressure
Non-linearity (incl. hysteresis)	± 0.5 % of final value
Reproducibility	< ± 0.15 % of final value
Compensated temperature range	-10 ... +80 °C
Temperature coefficient	
... zero point	< 0.01 % / K of final value
... measuring span	< 0.01 % / K of final value
Membrane resonance frequency	> 30 kHz
Number of load cycles	> 10×10^6

Pin assignment	4 ... 20 mA
	Pin 1 = + Ub / signal + (pressure)
	Pin 2 = - Ub / signal - (pressure)
	Pin 3 = free
	Pin 4 = + Ub / signal + (temperature)
	Pin 5 = - Ub / signal - (temperature)
	Pin 6 = free
	Pin 7 = free
	Pin 8 = shield

Measuring range pressure		Measuring range temperature	Order data

Rotational speed sensor with reflection tag detection

Rotational speed measurement for many applications

The rotational speed sensor RS 110 uses pulsating red light (LED) reflected by a special tag at the rotating target. By using a polarisation filter, only the reflected light impulses are evaluated, disturbing reflections (e.g. unevenness of the surface, bright metal parts, keyways or high-contrast areas) are not detected. This achieves a reliable rotational speed measurement from distances between 50 mm and 4 m*.

25 reflection tags are included. Enter the number of used reflection tags as calibration value into the measuring instrument.

Dimensions

Dimensions magnetic holder (option)

Applications

- Recording the hydraulic efficiency of pumps
- Rotational speed measurement of fans of hydraulic cooling devices

Qualities

Measuring principle	auto-collimation
Light source	power LED with visible red light
Supply voltage U_b	10 ... 30 VDC
Ripple	< 5 Vss
Current consumption	< 30 mA
Output current max.	< 100 mA
Response time	500 µs
Switching sequence	1,000 Hz
Range	50 ... 500 mm (with standard reflectors)*
Protection type	IP 67
Signal repetition frequency	max. 500 Hz
Output signal	frequency (rectangular signal) / 4 ... 20 mA
Electrical measuring connector	5 pole device connector, M16 x 0.75
Environmental temperature	-40 ... +60 °C
Storage temperature	-40 ... +75 °C
Weight	141 g

Pin assignment

RS 110 (frequency)

Pin 1 = signal +
 Pin 2 = - U_b / GND
 Pin 3 = + U_b

Inductive rotational speed sensor

Rotational speed measurement for special applications

The rotational speed sensor RS 210 works inductively and is able to detect the cogs of a cogwheel. After entering the number of cogs into the measuring instrument, a reliable rotational speed detection is assured. The sensor head must be mounted between 1.5 and 2 mm away from the cog wheel.

Dimensions

Qualities

Measuring principle	inductive with integrated amplifier switch
Measuring range	up to 5,000 divided by the number of cogs of the measured cog wheel
Output signal	frequency (rectangular signal)
Electrical measuring connector	5 pole device connector, M16 x 0.75
Mechanical connection thread	M 10 x 0.75
Material casing	Aluminium, anodized 20 µm, RAL 5015
Supply voltage U_b	6.5 ... 30 VDC
Current consumption	12 ... 15 mA
Overvoltage protection	36 VDC
Response time	0.1 ms
Frequency range	12.5 ... 5,000 Hz
Isolation resistor	1 MOhm
Total resistance	$R_g = U_b / 0.015 + I_L$
Load resistance	4 ... 20 kOhm
Environmental temperature	-20 ... +85 °C
Storage temperature	-20 ... +85 °C
EMV test	EN 50081-2, EN 50082-2
Mounting orientation	arbitrary
Weight	50 g

Pin assignment

Pin assignment	Frequency
	Pin 1 = signal +
	Pin 2 = - U_b / signal - / GND
	Pin 3 = + U_b
	Pin 4 = free
	Pin 5 = free

Output signal	Order number
Frequency	3107-00-09.00

HySense PO 180

Position sensor with measuring wire

Highly accurate position measurement

The HySense PO 100 works on the measuring wire principle. It can be easily mounted and does not need linear guiding. It is suitable for use at load cranes, hydraulic presses and other installations where distances need to be measured or changes of position detected. All mechanical and electronic components are protected by a solid casing.

The measuring wire principle – a specially manufactured and calibrated wire is tightly wound around a high-precision drum that is driven against the pulled direction by a spring motor. Through the detection of the winding process the sensor converts the linear movement into an electrical signal.

Major advantages – The sensor is compact, has a very high resolution and accuracy. It has a high dynamic and is insensitive to environmental influences.

Please consider when using the PO 180: The exit angle of the wire from casing must be 90°, or there may be friction between the measuring wire and the casing, causing wear and tear. The top of the sensor should be protected against dirt and splash water and the measuring wire should not be positioned next to a machine or device part. The wire should never be loosened suddenly to avoid retraction into the casing.

Qualities	
Measuring principle	measuring wire
Output signal	4 ... 20 mA
Protection type (EN 60529 / IEC 529)	IP 65 (only with serial cable box)
Material casing / measuring wire	aluminium and high-grade steel / high-grade steel
Signal type	two wires
Supply voltage U_b	12 ... 27 VDC
Current consumption	max. 35 mA
Temperature coefficient	± 0.01 % / K
Nonlinearity	$< \pm 0.1$ % of the measuring range
Output noise	50 mVeff
Resolution	quasi infinite
Environmental temperature	-20 ... +85 °C
Storage temperature	-20 ... +85 °C
EMV test	IEC 1000-4-2, -4, -5
Vibrational stability	on request
Shock stability	on request

Pin assignment	4 ... 20 mA
	Pin 1 = + U_b / signal +
	Pin 2 = - U_b / signal -
	Pin 3 – 8 = free

Force sensor according to the deflecting beam principle

The deflecting beam principle (shear force sensor)

Since a force and the deflection of a beam is proportional, this sensor is able to determine a force by measuring its elongation or change in length.

Due to its compact design, these traction-pressure force sensors can be used in the laboratory, as well as in industrial environments. Made with corrosion-proof steel, the sensors have a standardized nominal characteristic value. They can be mounted easily allowing simple integration into existing structures.

Measuring / collection of

- moulding and insertion forces
- spring forces
- cutting forces
- force and force control during assembly
- pressing forces in drilling machines

Qualities

Measuring principle	flexural beam
Output signal	4 ... 20 mA
Electrical measuring connector	5 pole device connector, M16 x 0.75
Protection type (EN 60529 / IEC 529)	IP 65
Material casing	steel
Signal type	three wires
Supply voltage U_b	10 ... 24 VDC
Current consumption	max. 40 mA
Error limit	< 0.5 % of final value
Temperature error NP	< ± 0.04 % of final value / K
Temperature error receiver	< ± 0.04 % of measuring range / K
Non-linearity	< ± 0.15 % of final value
Hysteresis	max. 0.1 % of final value
Calibration in	N
Calibration tolerance	< 0.25 % of final value
Environmental temperature	-15 ... +85 °C
Storage temperature	-15 ... +85 °C

Traction force sensor

The force sensor works to the principle of center-line force measurement. You can record traction forces at lifts, cranes and housings, or twistings of masts, towers or platforms.

The force sensor is a threaded rod. This allows easy and universal fastening. The application chamber for the resistance strain gauge is protected from mechanical and chemical damage by an aluminium tube, cast with a highly elastic compound. Full bridges of resistance strain gauges measure the elongation and lateral expansion caused by traction forces.

Qualities

Measuring principle	center-line force measurement
Output signal	4 ... 20 mA
Electrical measuring connector	5 pole device connector, M16 x 0.75

Rotating torque sensors with friction ring

Highly accurate torque sensor, equipped with a cylindric shaft with feather keys on both ends. It is available for several measurement ranges and is designed for continuous rotational speed of 1,500 to 2,000 rpm.

Qualities

Measuring principle	rotating sensor with friction ring
Output signal	4 ... 20 mA
Nominal characteristic value	2 mV/V
Electrical measuring connector	5 pole device connector, M16 x 0.75
Mechanical measuring connector	cylindric shaft with feather keys
Protection type (EN 60529 / IEC 529)	IP 50
Signal type	three wires
Supply voltage U_b	8 ... 24 VDC
Current consumption	< 50 mA
Error limit	0.1 % of final value
Working torque	120 % of final value
Limit torque	130 % of final value
Breaking torque	250 % of final value
Factor range DIN 50100	70 % (peak – peak)
Maximal rotational speed	2,000 U/min
Twisting angle	0.5 ° at nominal torque
Reproducibility	± 0.05 %
Lifetime of brushes	5 x 10 ⁸ rotations
Nominal value tolerance	± 0.1 %
Environmental temperature	-10 ... + 60 °C
Storage temperature	-10 ... + 60 °C
EMC test	IEC 801-2/4/5, EN 55011, EN 55022

Vibration sensor

The vibration sensor comprises a capacitive acceleration sensor for data collection with short response time under serious environmental conditions. It is mounted on a magnetic foot that can be used to attach the sensor to any metallic surfaces. It reports vibrations by frequency and therefore can be connected to all Hydrotechnik measuring instruments.

Calibration values

Enter calibration value „1“ when used with MultiSystem 5060 and „1,000“ when used with MultiHandy 3010.

Qualities	
Measuring principle	capacitive acceleration sensor
