

Dear Valued Customer,

R8

Evolution that makes a Difference

Italgroupp Stellar Motor Type Evolution – New R8 Series

After more than twenty years of continuous improvements, the historical stellar motor series IAM, IAC and IAMD evolve in the new **R8 series**.

Available in the three variants **R8M** (single displacement), **R8C** (dual displacement), **R8D** (single displacement heavy duty), replaces the old series granting supply chain continuity and full interchangeability.

Starting from January 1st 2019, the new R8 series will replace the old ones and all model codes will be gradually updated.

Only the name of the series will change, while the order code structure for displacement, shaft type, distribution and other options will remain unchanged.

R8 embodies all the technical developments and evolutions of the last few years, thus offering a more performing product with greater efficiencies.

Furthermore, with the new **R8 series**, Italgroupp expands the displacement range of its stellar motors type reaching **13.000cc/rev.** thanks to the new size H9: available in the displacements 7.000cc, 8.000cc, 9.000cc, 10.000cc, 11.000cc, 12.000cc and 13.000cc.

Old Series		New R8 Series
IAM	→	R8M
IAMD	→	R8D
IAC	→	R8C

For more information, clarifications or special requests, please do not hesitate to email us at sales@italgroup.eu or take vision of the new product pages on our new website www.italgroup.eu.

With Warm Regards.

Italgroupp Srl
