

HIGH PRESSURE GEAR PUMP W300

THE POWER OF THE W300 B SERIES

Concentric is one of the world's leading manufacturers of hydraulic pumps. Our focus on important strategic markets such as trucks, construction equipment and materials handling has brought results: a series of high-performance hydraulic pumps. The W300 series builds on the versatile technical platform represented by the W series.

W300 High Pressure Gear Pumps are optimized for demanding work, with harsh weather conditions, rugged operations and long service intervals. The W300 series is a range of cost-efficient small pumps for all applications in which the customer's demands for quality and accessibility are particularly high.

W300 DESCRIPTION

The W300 pumps come in single configuration and have a two piece modular design. All, mounting flange, and rear cover are manufactured of high strength aluminium alloy.

For optimum strength, gears and shafts are precision machined as a one-piece-part. The 11-tooth gear geometry has been optimized for low noise level and low pressure pulsation.

All shaft bearing surfaces are continually cooled and lubricated by a controlled flow of fresh oil. This permits operation across a wide speed range at very high loads. Extra large slide bearings help guarantee a long service life.

A wide range of mounting flanges and port sizes are available to meet all international standards.

General data

Displacement V 0.8 ... 5.7cm³
 Speed n 800 ... 6000 rpm
 Pressure rated pressure p_1 up to 230 bar
 intermittent pressure p_{II} up to 255 bar
 Operating temperatures t up to 90°C
 Average volumetric efficiency 97%
 The maximum values for n , p_1 and t for a given pump specification may be applied sim-ultaneously.

Options

- Rectangular flanges, through bolt model.
- Tapered shaft with key, tang shaft.
- Thread ports of flange ports.
- Clockwise or anti-clockwise rotation.
- Integrated valve features.

PERFORMANCE DATA

Operating pressure range

Inlet port: continuous, minimum -0,20 bar
 intermittent, minimum -0,35 bar
 maximum +2,00 bar

Outlet port (See tables on pages 4-6)

Product has been tested to 500,000 cycles at p_{II} . Pressure p_{II} is permitted at maxi. 10 sec loaded following 4 sec minimum unloaded. Above represents performance which can be expected from units incorporating flange flange port styles.

Speed range

Minimum speed for all pump sizes depends on the pump model in question and can be identified from Tables below onwards for respective models.

Maximum speed for single pumps depends on the pump model in question and can be identified from Tables onwards for respective models.

Noise performance data according to DIN 45 635.

Typical levels for pump type W3B1-2,5 at 160 bar using mineral oil with viscosity of 40mm²/s and at temperature of 50° C at different speeds:

1500 min ⁻¹	2300min ⁻¹	3000min ⁻¹
52 dB(A)	56 dB(A)	57 dB(A)

Hydraulic fluids. The use of HL-or HLP-hydraulic oil according to DIN 51 524 is recommended.

The permissible viscosity for all W3B pumps ranges from 800 to 12 mm²/s.

The permissible cold start viscosity is 2000 mm²/s.

We recommend to contact Concentric before using fire resistant or bio-degradable fluids.

Temperature range

Amb. temperature,	mini.-25° C;
	maxi.+80° C
Fluid temperature,	
continuous operation,	maxi.+80° C
short term operation,	maxi.+90° C

Please note

Viscosities -when operating at above temperature limits-have to remain within the range specified under "Hydraulic Fluids".

Fluid cleanliness

Fluid cleanliness according to ISO 4406/1986 Code 18/14 or better is required in order to assure the pump's high level of efficiency in the long term.

Drive arrangement

Flexible couplings are preferred for direct drives. Please contact Concentric for indirect drive requirements.

Mounting position

As required.

Symbol

Single pump.

FLANGE CODE 20

All shaft bearings are continually cooled and lubricated by a controlled flow of fresh oil. This enables operation across a wide speed range at very high loads. The largesized slide bearings support the pump's long-life condition. A wide range of mounting flanges and

port sizes are available to meet European and international standards. W300 pumps may also be supplied with threaded ports in the rear cover (Rear cover's shape is prepared for this option). This option can simplify installation where space is limited.
